10.4. Determination of Net Asset Value.

The Fund Manager determines Net Asset Value per Unit. The assets of the Fund include the total market value of respective Fund's investments, cash and cash equivalents, receivables and accrued income. The market value of Fund's investments based on the security market quotes of the Fund's portfolio. The liabilities include the fees specified in Section 15 of the Offering Material, payables and accrued expenses.

Net Asset Value is the difference between market value of Fund's assets and its liabilities.

Net Asset Value per Unit is calculated by dividing of Net Asset Value by the quantity of classified units on a Valuation Day.

10.5. All valuations of assets and liabilities of the Fund are made applying the local and international valuation standards. Valuations are nominated in US Dollars.

10.6. The value of the assets of the Fund is generally determined on the accrual basis of accounting using IFRS (including IFRS 13: Fair Value Measurement) as a guideline.

10.7. Weighted average cost method would be the most accepted cost relief methodology. Income accruals are booked as income at the time it is earned.

10.8. The Fund Manager determines the liabilities of the Fund independently and the final Net Asset Value is calculated by deducting the liabilities from the Net Asset Value.

10.9. The Fund Manager periodically, but not less than once in a month, informs the Unitholders about composition and value of the net assets of the Fund calculated using the market price, as well as the estimate value of the Units in accordance with the internal rules of the Fund.

10.10. The Fund Manager does not provide any preferential treatment of Unitholders, all procedures and rules apply to all Unitholders.

10.11. A Fund manager and administrator exploit the following techniques recommended by the International valuation standards:

	APPROACH	TECHNIQUES	INSTRUMENTS	PERIODICITY
1	Market approach	<ul style="list-style-type: none"> • Comparable transactions; • Market quotes of liquid instruments • Comparable multiples 	Cash and cash equivalents (in case of high impairment risk)	Daily

		• Amortized methos	cost	Debt securities held to maturity

10.12. Unquoted asset category may include thinly traded corporate debt securities that are not traded through regulated exchanges or recognized markets.

In most cases, the valuation of unquoted investments will require assessment of their specific cash flows and investment terms, with the valuation often based on comparable transaction parameters and risk adjusted discount rates.

The investments are generally held at cost for the first twelve months of ownership unless there is an apparent change in circumstances which would indicate the need for a new valuation. The costs of acquisition are used as inputs in the calculation of the buy/sell spread which is applied on a proportional basis across those investment options holding these assets.

In certain cases, where the directly held investment (or underlying investment) has a directly comparable listed counterpart, the Fund may utilize the listed price of the listed comparable to value the asset in question.

The Fund may also accept the valuation reports from independent expert valuers.

Particular valuation methods for the individual classes of unquoted investments will be determined by Fund's Manager.

In all instances whereby a valuation is adopted, the Fund will ensure that all the following is considered and documented:

- the reasons why a valuation was adopted;
- what information has been relied upon in determining the valuation;
- what the key risks are to the valuation.

11. RISK MANAGEMENT / RISK FACTORS

11.1. The Fund Manager is responsible for the performance of the risk management function. The Fund Manager will employ risk management practices in managing the Fund's investment activities.

11.2. Prospective Unitholders are advised to conduct their own due diligence, including, without limitation, as to the legal, taxation, financial and other consequences of an investment in the Fund, including the merits of investing and the risks involved.

11.3. An investment in the capital of the Fund involves certain risks, including, but without limitation, the risks below:

- **Market risk** – The Fund may experience losses due to factors that affect the overall performance of investments in stocks and shares/units of OEICs. Market risk, also called "systematic risk," cannot be eliminated through diversification. Sources of market risk include recessions, political turmoil, changes in interest rates, natural disasters and

ONYX CAPITAL OEIC LTD.
FUND OFFERING MATERIALS

terrorist attacks. Systematic, or market risk tends to influence the entire market at the same time.

- **Concentration Risk** – A Fund may hold no more than 50% of its net assets in one particular instrument. In this situation, the Fund’s assets may be less diversified. In addition, such concentration may make the Fund’s unit price more volatile and may reduce the liquidity of the Fund’s portfolio.
- **Emerging Markets Risk** (in case of the investment in listed stocks) – Emerging markets risk occurs because emerging markets are generally smaller, less developed, less liquid and more volatile than securities markets in Developed Markets. The risk of political or social upheaval is greater in emerging securities markets. Inflation and rapid fluctuations in inflation rates have had and may continue to have negative effects on the economies and securities markets of certain emerging market countries. Moreover, many of the emerging securities markets are relatively small, have low trading volumes, suffer periods of relative illiquidity and are characterized by significant price volatility and high transaction costs.
- **Foreign Currency Risk** – Currency risk occurs when the Funds invest in assets denominated in currencies other than US Dollar. Changes in foreign currency exchange rates will affect the value of the portfolio. The main investment focus of the Fund is vested on the high yield debt securities issued in Kazakhstan and abroad. Thus, the majority of the investments will be in Kazakhstani Tenge and the foreign currency risk is one of the significant risks of the Fund.
- **Operational risk** – This may come in form of counterparty platform failure during trading.
- **Liquidity risk** – Liquidity is the ability of the Fund to sell its investments without suffering losses. Liquidity risk stems from the lack of marketability of an investment that can't be bought or sold quickly enough to prevent or minimize a loss. To forestall this, the Fund will seek the highly stable investors or partners that will be capable to buy interests owned by Fund.
- **Dividend payment risk** – Though the Fund has approved its dividend payment policy, payment of dividend to Unitholders is not guaranteed and will depend on profitability of activities, investments plans and the general financial situation.
- **Geopolitical risk** – There is a risk that geopolitical changes can have an effect on activities of the Fund (e.g. conflicts of States, internal conflicts in neighbouring States, insurrections, wars) and for this reason the investment value of the Fund can decrease or it may be impossible to sell the Fund’s investments at the desired time for the desired price.
- **Risk related to statements in the future tense** – Statements in the future tense are based on estimate, opinion, expectations and forecasts regarding future events and financial trends that will possibly have an effect on the activities of the Fund. Statements in the future tense include information about possible or presumable results of the Fund’s activities, investment strategy, contractual relationships, borrowing plans, investment conditions, effect of future regulation and other information. The Fund cannot assure that statements in the future tense will reflect future events and

FUND OFFERING MATERIALS

circumstances fully and correctly. The Fund, the Management Company and its employees do not undertake to adjust or modify statements in the future tense, except to the extent required by laws of AIFC.

- **Risk of valuation of the Fund's assets** – The assets of the Fund will be evaluated according to the main rules set in Constitution and the Valuation Policy. Valuation of individual assets held by the Fund shall be performed by at least one independent appraiser, however such valuation of assets shall be only determining the value of the assets, which does not automatically mean the exact sale price of an investment held by the Fund, which depends on many circumstances, for example, economic and other conditions, which cannot be controlled. Thus, the sale price of investments held by the Fund can be higher or lower than the value of assets determined by a property appraiser.
- **Competition risk** – The Fund, investing into investment objects, will compete with other investors, including, without limitation, with other investment funds/companies or real estate investment funds. Thus, there is a risk that competition with other investors will demand that the Fund would conduct transactions at less favourable conditions than it would be possible in other cases.
- **Risk related to possible liability of the Fund** – There is a risk that the activities of the Fund and the general performance results of the Fund can be negatively affected by demands and claims regarding non-disclosed or non-identified obligations and/or violations in connection with investments acquired by the Fund, which may result in the Fund's liability for such obligations and/or violations and for this reason the value of the Fund's investments and, at the same time, the price of the Units can significantly decrease.
- **Risk of insolvency of the Fund** – In case of realisation of one or several of the above-indicated risks, which would have a negative effect on the value and/or liquidity of investments of the Fund, this can result in the Fund's solvency problems, when the Fund will be incapable of fulfilling its obligations. In such a case, Unitholders can lose all their funds invested into the Fund.
- **Risk related to the duty to redeem Units of the Fund** – Legal acts provide for a duty of the Fund in certain circumstances to redeem its Units from the Unitholders that requested such redemption. Accordingly, if the Fund becomes subject to the duty to offer to the Unitholders redemption of its own Units and if such a redemption is requested by the Unitholders holding a significant number of Units, the Fund can be forced to sell its investments urgently, which can significantly reduce the return earned by the Fund from sale of its investments.

11.4. The Fund Manager maintains a liquidity management process to monitor the liquidity risk of the Fund, which includes, among other the liquidity, the subscription and the redemption process.

11.5. The Fund Manager controls the liquidity risk of the Fund by monitoring the structure of assets and liabilities in terms of duration of the redemption process by Unitholders and information on future cash flows.
